## Performance Management

Chapter 1.1

### EPM – What is it?

An area of Business Intelligence (BI) which monitors & manages an organisation's performance, according to Key Performance Indicators (KPIs)

A framework for organising, automating, and analysing business methodologies, metrics, processes and systems to drive the overall performance of the organisation

It helps organisations translate a unified set of objectives into plans, monitor execution, and deliver critical insight to improve financial and operational performance

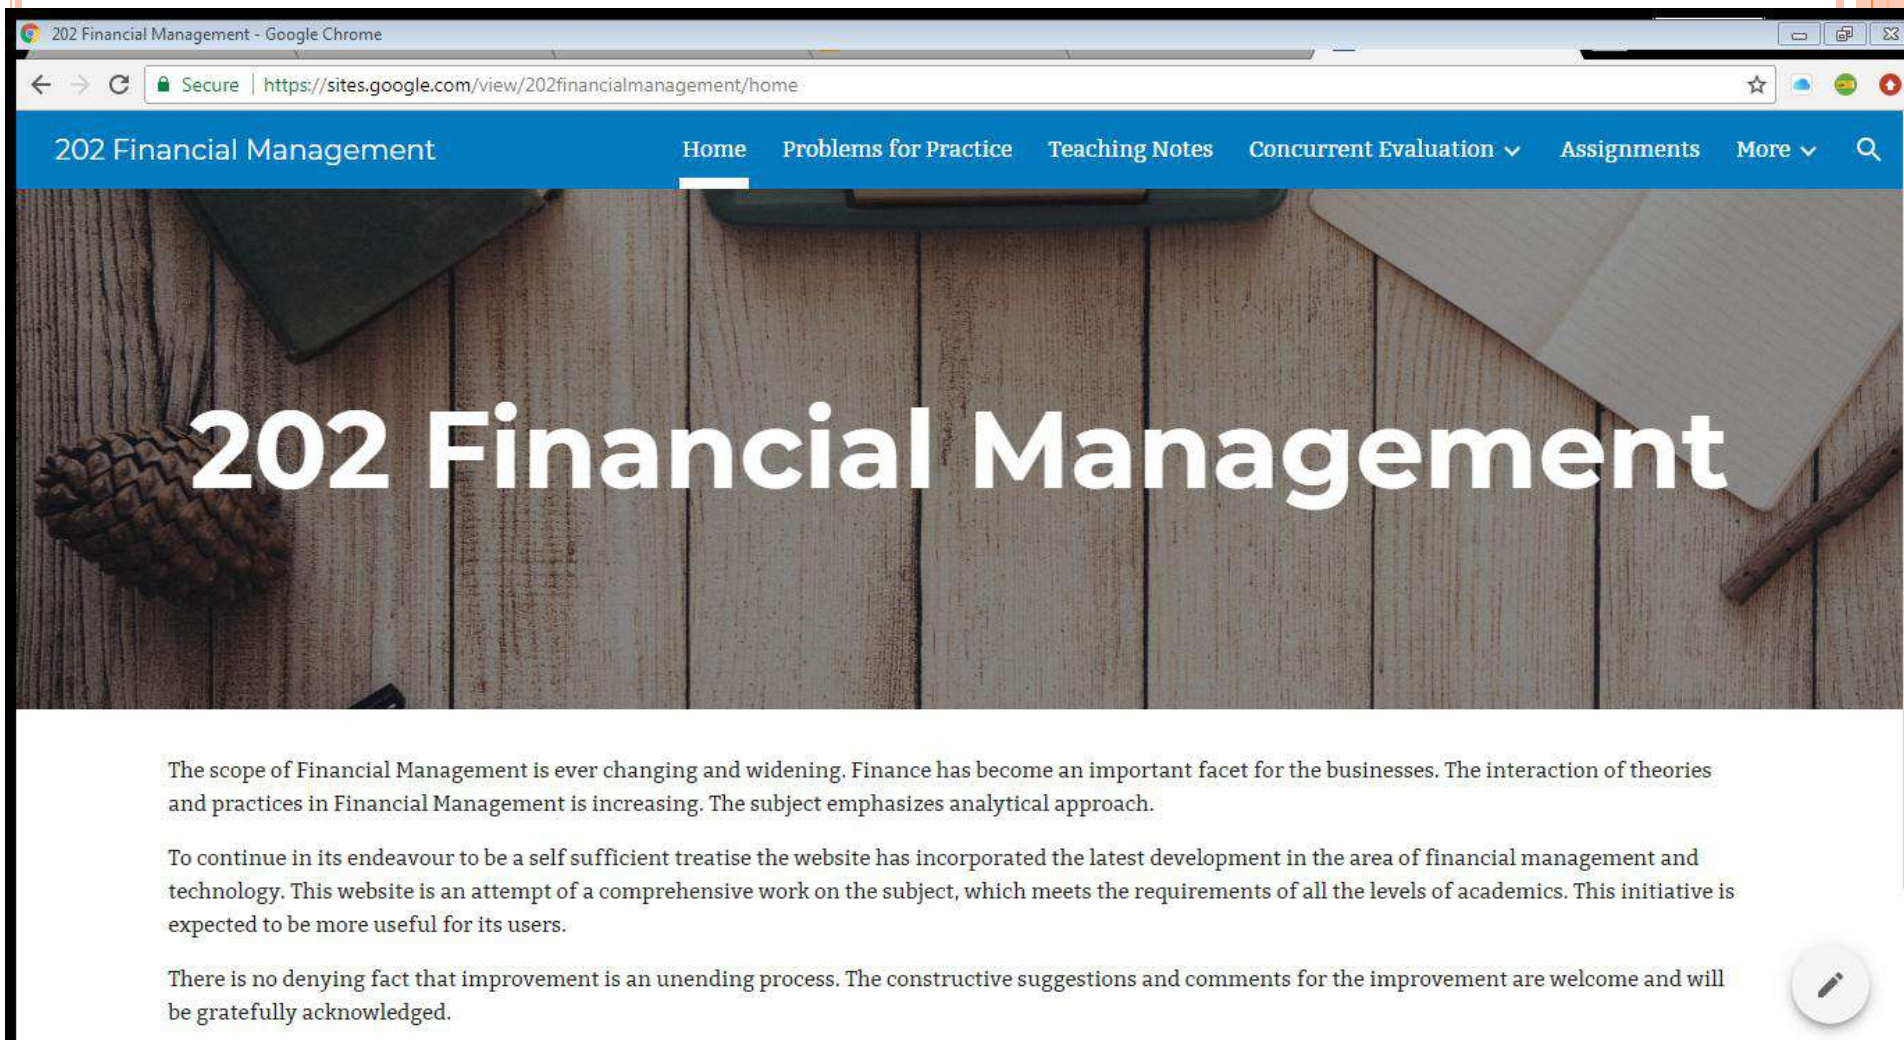

“Few factors are as important to the performance of an organisation as measurement... and measurement is among the weakest areas in management today.”

- Peter Drucker
