## SBPIM RESEARCH CENTER

Research is required not just for students and academics, but for all professionals. It is also important for budding and veteran writers, both offline and online. Among professionals finding an interesting topic to discuss and to write about should go beyond personal experience. Determining either what the general public may want to know about or what researchers want others to realize or to think about can serve as a reason to do research.

"Knowledge" basically pertains to facts based on objective insights and/or study findings processed by the human brain. It can be acquired through various ways, such as reading books and online articles written by educators, listening to experts, watching documentaries or investigative shows, conducting scientific experiments, and interaction with other people, among others. These facts can be checked to ensure truthfulness and accuracy. Social sciences directly involve people.

**Dr. Bhushan Pardeshi**  
Head of Department – Research

Research in social sciences arena deals with the behavior of people in their different roles, such consumers, competitors, producers, executives, salespersons, leaders, workers, followers, teachers, students, opinion-makers, etc. Research carried in social sciences deals with the systematic method of discovering new facts or of verifying old facts, their sequence, inter-relationship, casual explanations and the natural laws which cover them.
